

Weekly Report

2015-5-3

Feiran Wu

The main tasks in this week is to fulfill the modification of the three papers.

EasyXplorer

I organize the code of EasyXplorer and import the recovered data into the system to make some cases.

Until now, the method part has been refined and still I need to append more effective cases.

Mobility Pattern Graph

The mobility pattern graph is stuck by the data. The bigger the data is, the poorer efficiency the system performs. Furthermore, the code needs to be refined to eliminate the bugs. In general, this paper needs cases, yet the system often crashed because of the size of the data and the quality of the code.

TCP Tree

75% of the code in TCP Tree has been completed. This paper needs to modify the interface introduction and improve the cases.
